**Product 2: Dell S2721QS Monitor 27 Inch, 4K UHD (3840 x 2160) IPS Display, Ultra-Thin Bezel, AMD FreeSync, HDMI, DisplayPort, VESA Certified - Silver**

**Description:**

The Dell S2721QS Monitor provides stunning visuals. It has a 27-inch 4K UHD IPS display that provides breathtaking clarity and vibrant colors. The ultra-thin bezel design provides an immersive viewing experience. Enjoy tear-free gameplay and smooth visuals with AMD FreeSync technology. With HDMI and DisplayPort choices, you can easily connect. This feature-rich display for work or play will enhance your visual experience.

**Reviews:**

- I have two Dell 27 inch monitors. This one was my second purchase. It's easy to set up. It has a sturdy build. Excellent connectivity and the additional USB ports and sound port make it a perfect addition to my desktop. Color is accurate, picture quality is bright and clear. Use both dell monitors on a Mini-PC primarily as a photo editing platform, but the 4k allows me to work with high quality video as well. I have no complaints. I would buy this again if I needed to.

- Dell has become my go to for monitors. The build quality is always high, the picture is clear and it works well. I have this monitor setup with an Anker USB-C dock hooked up to an M1 MacBook Air. No, it cannot do multiple external monitors, but a single large monitor is what my wife had with her old iMac 27" and this monitor does not disappoint. No, it's not the highest in any spec, but it's a solid choice for standard productivity tasks like documents and some media work like photos and videos. The quality and functionality represents a good value for the money.
- This monitor is superb; more than a bargain at the price I paid for it (\$243.79, including shipping). The default setting of 75 for brightness is extremely powerful; I turned it down to 50 and it's still quite bright. The resolution is incredibly sharp and colors are true and accurate. The anti-glare coating is very effective. It's hard to find a flaw here, but if I were to mention one, this monitor does NOT support USB-C / Thunderbolt. Your connectivity is limited to HDMI and DisplayPort.
- I'm a photographer who is frustrated editing on this monitor because it is not color-calibrated. It doesn't even have a color-accurate mode, even my brother's cheaper gaming monitor has a color-accurate mode. This issue isn't why I'm giving the monitor 2 stars however, I should have done the research I just saw it had 99% color gamut and thought it would suffice. The reason for the 2 stars is the constant issues the monitor is having. From causing my laptop to not start up correctly, to randomly disconnecting the monitor is always frustrating to deal with. I have to have it disconnected when I turn on my laptop because if it's connected my laptop doesn't boot up correctly and gives me the BSOD, sometimes it disconnects, and unplugging and plugging it back in won't fix the issue I have to restart my laptop for it to work correctly again. I regret buying it, especially for the +\$300 price tag at the time. I would have been better off with another monitor.
- This would be a great monitor but I have trouble with my M1 (Silicon) MacBook Pro. The display flickers when certain images/colors/brightness are on screen. Google it and you will see a ton of M series MacBook users with this problem, with no solution from Dell or Apple, and Dell says officially they do not support Mac at all. I had zero problems with it and my older Intel-based Mac Pro (booting into Mac OS or Windows). But the flicker occurs when using the M1 MacBook with no real solution anywhere except "it's not compatible"
- The monitor was great for the first few months and then suddenly started flashing after I not using it for 10 days. I got an immediate response from customer service to have the unit replaced. However, they sent me a refurbished monitor that arrived broken. All in all just a waste of time for me. It's cheap but just not worth the hassle. Spend a little more for peace of mind. Also, the picture quality isn't the best. You can pick out pixels in the display
- First off, I really do like this monitor, now that I have gotten it tweaked in for my use. It is actually a simple, straight forward machine, if only they had included even rudimentary instructions in the box, which is the reason for giving it only 4 stars, when it deserves 5 stars...The pictorial instructions got me hooked right up, but I almost returned it, because I could not figure out how to turn it on!!! After about 35 minutes of frustration, including online research, I ran my fingers all along the bottom and top of the machine, and felt a little bump at the bottom right, and luckily turned it on. There is no icon to tell you this switch exists, and the instructions show a picture

of the power button where the headphone jack is!! ... I am using this monitor for my digital audio recording workstation, with a Mac M4 Pro computer. The screen was too bright for my tastes, but my Mac had some screen adjustments which allowed me to warm the screen up, but then everything looked kind of yellow, which was not satisfying either. Again, I searched the bottom of the machine, thinking that there HAD to be some kind of adjustment to lower the brightness, and I felt 3 little bumps, near the elusive power switch, but I thought they were just part of the trim, and that no one would make a machine with such inconvenient controls.. but no, they were adjustment buttons!! I only found these after a few days of frustration, all of which was needless, if instructions had been included... Anyway, at this point, I am totally happy with this monitor- very crisp, sharp, pleasant picture, now that I have lowered the brightness.. I love the fact that almost the entire screen is the picture, with a border that is about 3/8" at the top and sides, and about 3/4" at the bottom. I got this on sale for \$213.00, and for that price it was a bargain, but the current \$279.00 price is still probably worth it, I think. It serves my needs perfectly.

- This is a decent monitor that was on sale when I needed a new wide screen monitor. Looking back though, I would have bought something else since it makes my multiple monitor set up a bit weird due to differences in physical sizes and resolutions. Since this has the same resolution as the smaller monitors I already owned but is physically bigger, it ends up with everything on this monitor looking larger than it does on all my other monitors. This was always going to be a second wide screen monitor and I bought a bigger/nicer widescreen monitor that has a much higher resolution since I bought this one. That new one doesn't have this issue so I can move things just fine between my older monitors and that one without them being a noticeably different size. I refer to this one as my old man monitor now, good for quickly blowing things up to a larger size but not so much for multitasking using multiple windows on one monitor like the newer monitor I bought. In a four monitor set up with two very old monitors to be replaced before this one it will still get plenty of use though.
- I'm really happy with the quality of the images, especially when viewed from various angles other than head-on. I knew that the sound system was not great, but not expecting that even with all possible interventions in Windows and on the monitor itself that I began to wonder if I should also buy a pair of hearing aids. CONTRARY to many reviews that wrote disparagingly about the so-called wobbly stand, I found it wobbly only before I noticed on the provided set-up sheet of instructions that it was necessary to tighten the connection between the base and the post holding the monitor itself by tightening the screw that is factory installed for this purpose. Tighten that screw and the post is absolutely rigid.
- i had bought this for my son's birthday. here are my comments:
  - the screen is an LCD. i know that i wasn't going to get a big fancy OLED this size for under a thousand dollars, but i feel like the manufacurer had deliberately avoided mentioning the screen type. however, the color quality and visual quality are much better than my previous setup (a 41 inch 30hz LCD samsung smart TV).
  - the volume is probably the best thing about this: loud sounds are hushed down and background sounds are very easy to hear, ideal for horror or stealth games. i actually have the volume at 1% because xbox doesn't seem to have a native volume control, so i'm sure the speakers could be deafening if you wanted.

-the curved screen makes it easier to sit closer to the screen without hurting your eyes, and while the colors don't go very dark, lighter off-whites are very easy to spot. i can't wait to use this for digital drawing.

assembly also just involved clicking together a two-piece stand and inserting cables. the monitor even moves a bit to make cable insertion easier.

but my favorite thing is that this product is "dumb", it doesn't have any eavesdropping virtual assistants, unneeded internet connectivity, or ads. i bet that it was only \$360 because dell marketed this as a "monitor" rather than a "home entertainment platform", however it still has the quality graphics one would expect from a modern appliance.

i am a bit mad at amazon for not putting the product into an anonymous brown box before leaving it on my doorstep at 3:30 PM, but i can't blame the seller or manufacturer for that.

- **Available in Color: Hi Vis Lime/Black Bottom**
- **Available in Sizes: MD, LG, XL, 2XL, 3XL, 4XL, 5XL**
-

## Reviews:

1. The jacket is as described, time will be the test of quality. Not fond of the hood as it makes collar too bulkin when folded.
2. My Husband loves this jacket. Its comfortable and warm. Delivered quickly and is good quality material.
3. Nice coat , runs true to size , good price
4. Nice warm jacket. Hood tucks in collar. Would buy again. Fast shipping
5. Thanks so much for the speedy fast delivery the jacket looks great it's insulated and can be used as a rain coat. Thanks again
6. Fast shipping. Great product. Great price. Not a huge fan of the hood, it's virtually useless, but at least it had a hideaway in the back in the collar so you can make it disappear.
7. Absolutely love this jacket. It is very warm and very well made. For the price you can't beat it. If you are looking for a good reflective work jacket you can't go wrong with this one. My only complaint would be the way the hood is made. The hood isn't insulated nor is it sewn all the way across the bottom where it connects to the coat. Oh yeah this item arrived within 3 days of purchase. So AAA+++ on shipping.
8. Good looking, great quality, excellent condition, worth the money.
9. Very good quality material, not too big not too small, just a perfect fit, super fast shipping, very happy with my purchase.. thank you!!
10. I ordered this Jacket and i got Damaged ans zipper not working and i have contacted the seller i send him couple messages and still not respond i have to call ebay and do next step Never Order from this i not recommended this seller sorry but i have to tell truth.
11. hoody is a little less quality..it will do,,,,,

12. I ordered a 4 x but got a 3 x instead. But it is a nice jacket well pleased with the way the jacket is made
